This tapered member frame is typically used in clearspan situations from 40 ft. to 150 ft. It can be either gable or single slope. Common roof slopes of 1/4 to 4 in 12 are offered. When large clearspan areas are required for special industrial and commercial projects, the Clearspan frame type is typically the economical choice. The Clearspan can be used with either cold-form purlins or open web joists.

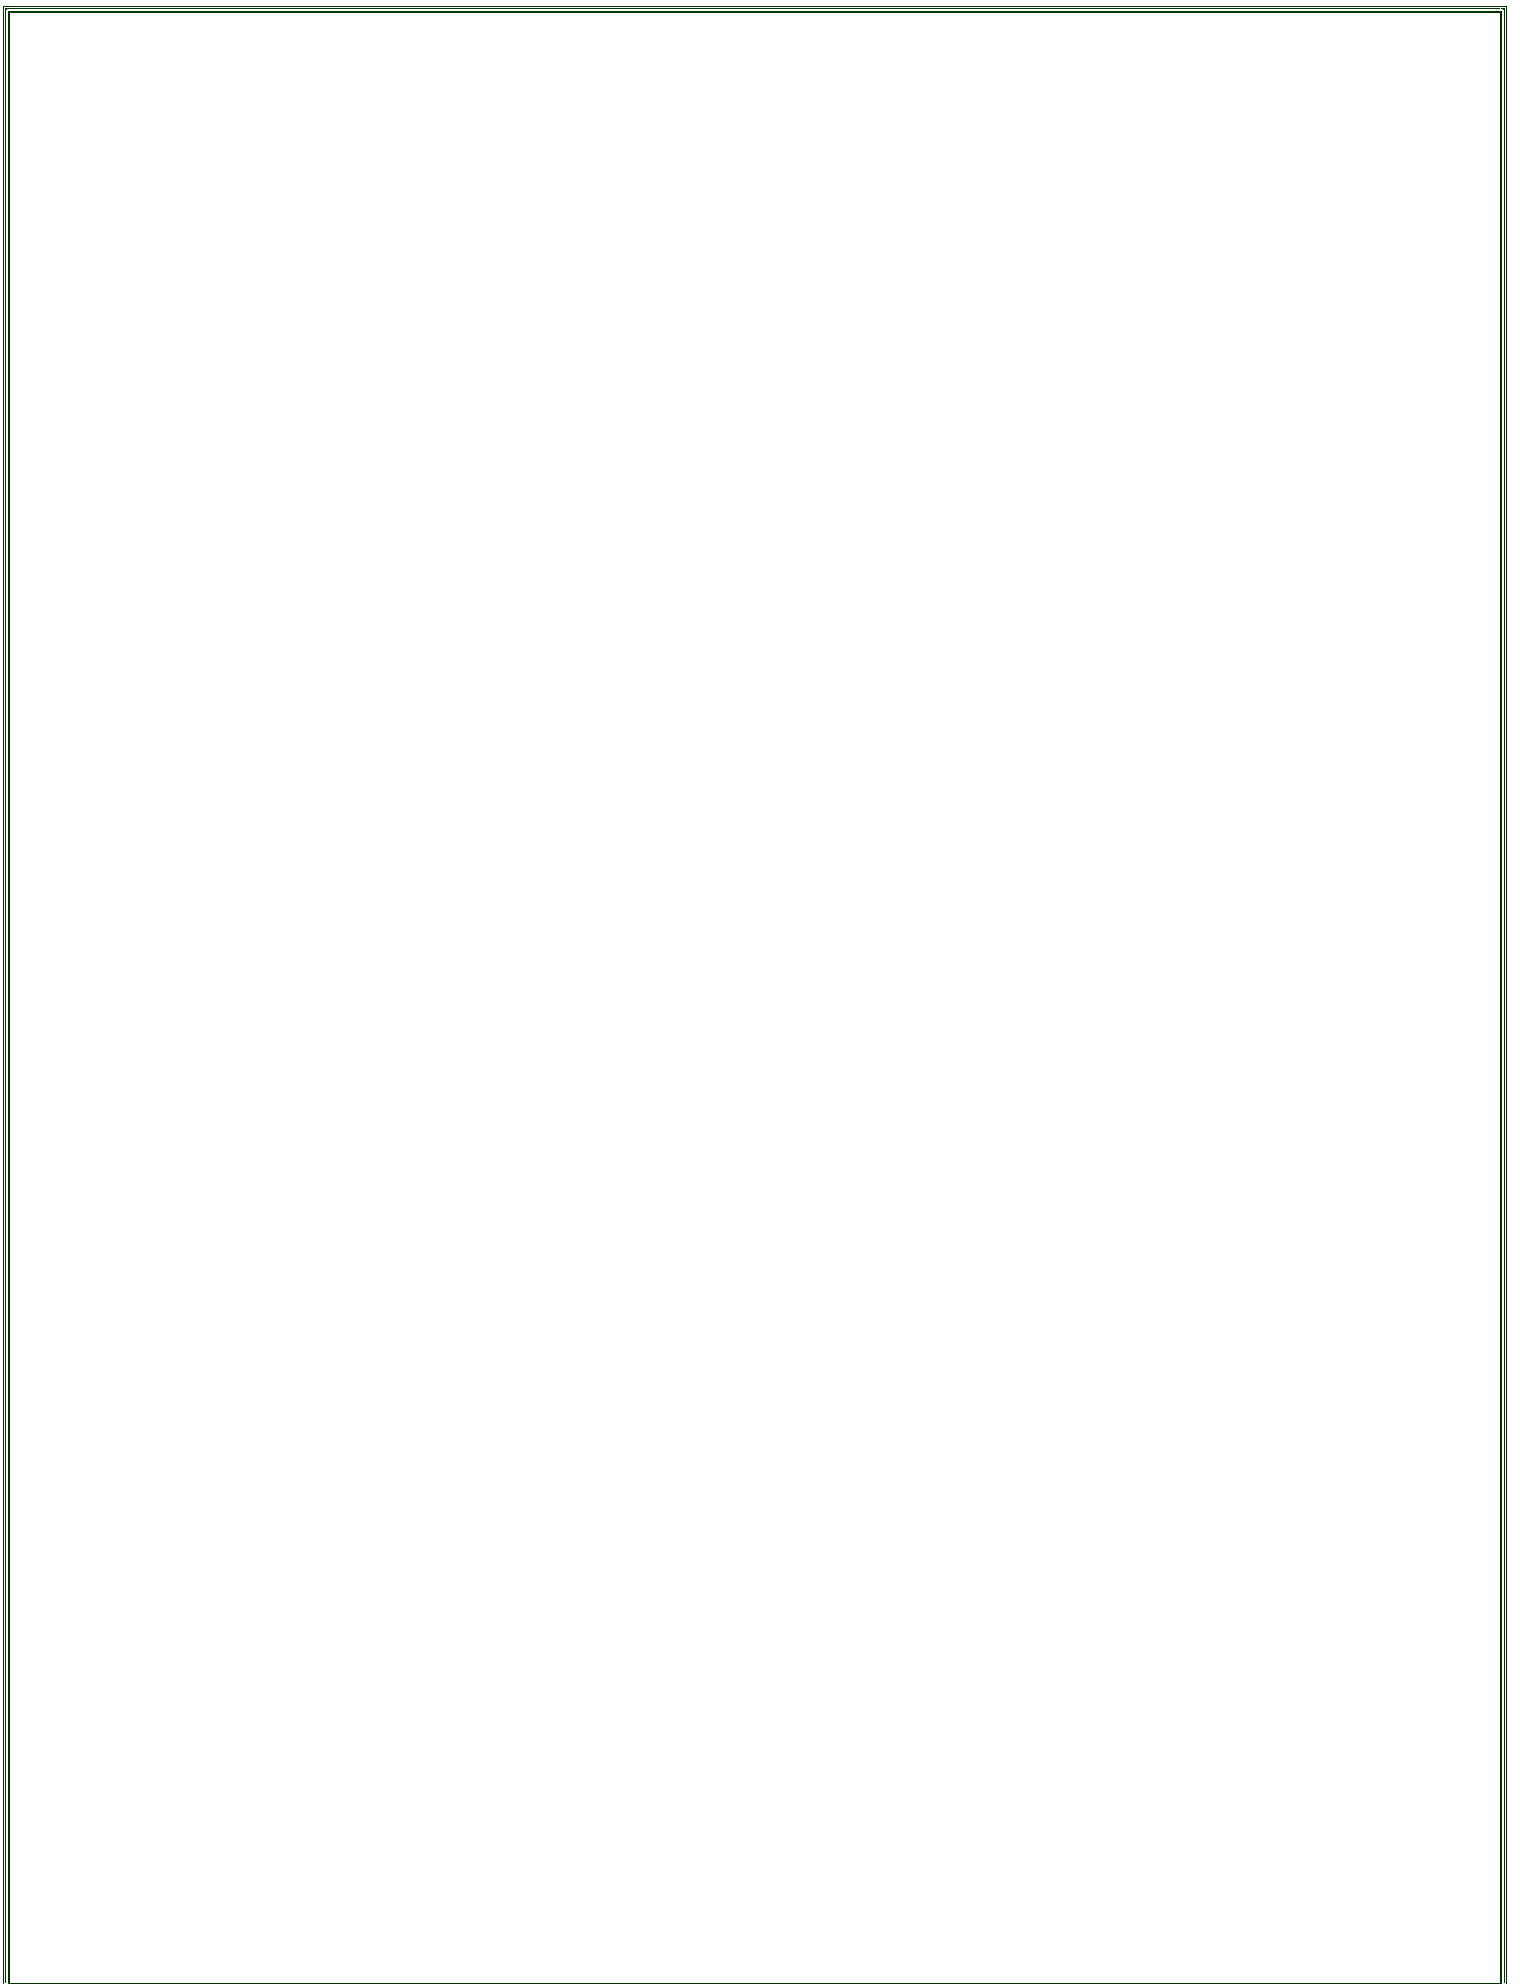

The solid web rigid frame with interior columns provides multiple spans on wider buildings. It can be either gable or single slope. This frame type is economical with individual spans of 40 feet to 80 feet and building widths from 80 feet to 300 feet plus. Roof slopes are 1/4 to 1 in 12.

This straight column rigid frame is designed for maximum efficiency of interior space. It is suitable for all types of small buildings that require clearspans from 20 feet to 60 feet.

Roof slopes of 1/4 to 1 in 12 are available. The Tapered Beam frame is ideal for partitioning interior bays and small crane support systems.
